Escape Sequence	Description
<code>\n</code>	Newline. Position the cursor at the beginning of the next line
<code>\t</code>	Horizontal tab. Move the cursor to the next tab stop.
<code>\\</code>	Backslash. Print a backslash character in a print statement
<code>\"</code>	Double quote. Print a double quote character in a print statement

String concatenation

input versus eval - give some examples
Use string concatenation to print fractions.

`n*string`
